**Software to Capture, Analyze, Document and Control Data**

**Capture**
Set up communication to instruments through the WaveStar Instrument Manager. The Explorer View displays these instruments and reveals their corresponding properties. To capture measurements, select a property, click, drag and drop into an active application sheet and begin analysis.

**Analyze**
Use up to twelve data sheets for analysis:
- **Graticule Sheets** – Capture waveforms in YT or XY mode. Graphically view or edit multiple waveforms and masks on a graticule, with the same scale and position as the oscilloscope. Includes cursor measurements, horizontal and vertical gates, zoom function and annotation.
- **Instrument Explorer Sheet** – Move and manipulate files to and from the MS Windows desktop or other instruments, add/delete directories, format drives and more.
- **Stripchart Sheet** – Automatically plots multiple waveform measurements, such as rise time data, in a classic stripchart fashion. Sheet features cursor measurements, alarm control and annotation capabilities.
- **Tabular Sheets** – Capture, store, display and edit either waveform or data log information as a table of numbers on corresponding sheets. The Scalar Viewer Sheet displays measurements from the oscilloscope.
- **Measurement Sheet** – Calculate frequency, pulse width, rise/fall time, duty cycle, overshoot, peak-to-peak, amplitude, min, max, mean, cycle mean and RMS measurements.
- **Harmonic Analysis Sheet** – Produce power waveforms from current and voltage and calculate up to 51 harmonics.
