Der Neue Zollhof, Düsseldorf  
Built in 1999

Gehry-Tower, Hannover  
Built in 2000 - 2001

MARTa Herford, Frank Gehry  
Rhinoceros offers the possibility to work with developable surfaces by "lofting" two curves.

The shape of this building can be obtained by lofting two different curves together. Because of the fact that it's a curved surface it can be unrolled.

This time the building shape can be obtained by slightly twisting the upside of the building compared to the bottom one.
